# QRTICK
# Employee attendance and manage control using QR Codes

Simple Pre-preparation:
As the smartphone QR code scanners are simple and easy to use, there is no need for special training for the employees.

Easy Assembling and Disassembling:
Resources such as money, labor, stationery, and time are significantly spent in setting up and disassembling attendance and check-in counters. With QR codes, these get reduced by one-tenth at least. They take less check-in time and fewer staff members too.

Least Paper Waste:
Yes, QR codes are a green solution too. As the HR department doesn't need to use a lot of paper to record employees' attendance. The whole attendance data will be stored in the online cloud. This data can be accessed at any time.

No Special Equipment Required:
The HR department only needs to generate and place the QR code on the entrance. Further, it is easy to use a smartphone as a QR code scanner via mobile apps. There is seriously no need to worry about arranging laptops, staff members, and stationery.

Faster Attendance Taking:
The QR code technology takes only a few seconds per employee for checking in.

No Electricity:
Most attendance or sign-in desks need Internet and power supply so that their laptops function well. QR code scanners using mobile apps on a smartphone don't need electricity to scan the code.
